

# Hyperfilter

## Compressed Air Filters

Compressed air incorporates a high concentration of dirt, oil, moisture and other impurities. Failure to remove these contaminants will lead to escalating maintenance costs, lengthy downtimes and damaged finished goods.

Hyperfilter has been specifically designed to prevent these undesired effects, offering a comprehensive range of compressed air filters covering all industrial needs.

The secret of Hyperfilter is its highly advanced filter element. This combines a particle retention efficiency of 99,9999% with a very low pressure drop. The upshot is extremely clean air with minimal operating costs.

### Hyperfilter filtration grades<sup>(\*)</sup>

#### Solid particles

##### Class 1: Grade S

For particles up to 0,01 micron.

##### Class 2: Grade P

For particles up to 1 micron.

##### Class 3: Grade Q and D

For particles up to 3 micron. D grade is specifically designed for the filtration of dry dust, downstream the dryer.

#### Oil

##### Class 1: Grade S

Max remaining oil content 0,01mg/m<sup>3</sup>

##### Grade C

Activated carbon oil vapour removal

Max. remaining oil content 0,003mg/m<sup>3</sup>

##### Class 3: Grade P

remaining oil content 0,5 mg/m<sup>3</sup>

### Product Features:

- Protects tools and downstream equipment
- Increases efficiency, reduces downtimes
- Significantly reduces maintenance costs
- Full range of models and filtration grades for all industrial applications
- Guaranteed performance levels
- The new look housing features a redesigned inside to reduce pressure drops even further, saving energy

<sup>(\*)</sup> ISO 8573-1 Reference conditions

The differential pressure gauge warns when the element needs changing. Both a warning light and a remote contact are also available. Alternatively, it is possible to install an indicator on the filter.

The air-tight seal cannot be opened when the filter is under pressure, offering added protection.

The HDI zero-loss drain (standard on models HFN005-072 for filtration grades Q, P and S) features an auto-cleaning protection screen for highest reliability. Simply press the drain to verify its correct operation.

### Operation

- 1) The air enters the filter.
- 2) The air passes through the filter element, which holds virtually all solid and liquid particles with a size higher than the grade of filtration installed.
- 3) The filtered liquid and solid particles drop to the bottom of the filter to be removed by the condensate drain.
- 4) The filtered air exits the filter.

To maintain the air quality standards, filter elements must be replaced at least every 12 months with genuine Parker Hiross parts.

Annual filter element changes are therefore essential and ensure:

- Optimal performance is maintained
- Air quality continues to meet international standards
- Low operational costs
- Continued protection of downstream equipments & processes

Failure to perform the scheduled replacement can lead to increasing system pressure drops.

Grade	Filtration type	Typical applications
Q	general purpose	bulk liquid & solid removal, vacuum pump pre-filter, air blowers, refrigeration dryer pre-filter, large pneumatic tools
P	fine filtration	general pneumatic tools & controls, air conveyors, compressed air motors, sand blasting, shipyards & shipping, vacuum pump post-filter, metal working, adsorption dryer pre-filter (oil-free), air motors
S	ultra fine	air conveyors, spray painting, air logistics, instrumentation, air gauging, fine pneumatic tools, adsorption dryer pre-filter (non oil-free), oil-free air
C	critical filtration	hospital & medical, film processing, pharmaceuticals, non-critical breathing air (without CO/CO <sub>2</sub> removal), critical instrumentation, odour- taste and oil vapour removal, production / packaging / transport of food, breweries, beverages and dairies
D	very low dew point filtration	dust filtration, dry particle removal, pharmaceuticals, cosmetics, electronics, food, automotive, chemical, diaries, breweries, aviation, hospitals, refineries, plastics, textiles, railways, adsorption dryer post-filter

#### Accessories & versions:

- kit for installation in series of two or more filters;
- wall mounting kit;

- counterflanges kit (for flanged models);
- remote contact kit;
- element supervision indicator;

- differential pressure gauge;
- flanged models can be supplied in stainless steel for aggressive ambients.

Performances are indicated at filtration temperature of 20 °C and working pressure of 7 bar<sup>g</sup>. Weights are inclusive of filter element but without condensate drain. Materials: HFN005-370 in aluminium, **NFF** in carbon steel. Filters supplied with elements Q, P and S feature as standard HDI condensate drain up to model HFN072, HFN122 for models HFN122-HFS380 and HFD120 for models ~~NFF520-NFF4500~~. Filters supplied with elements D and C feature a manual drain. All filters are for operation up to 65 °C, 40 °C for activated carbon working temperature.
